

Engineered Coating Systems for the Built Environment

Armorize with AbShield™

Durable Interior Coating for New Construction & Renovations

GS – 550[©]

AbShield™ GS-550 is a new advancement in coating technology for the treatment of interior construction surfaces in new buildings and renovations where undesirable odors due to new or aged construction materials exist.

GS-550 is designed to eliminate odors including adhesives, bonding agents, masonry, wood, smoke, musty conditions and many more.

The coating dries and forms a breathable, flame retardant film to absorb and neutralize undesirable odors.

The coating can be applied to the surface of building frameworks, flooring, all cladding and wall covering, metal surfaces, masonry and much more.

The product formula includes an anti-microbial / anti-fungal system to protect the dried film layer from promoting fungal growth.

The coating is an excellent primer for final coats of desired interior paints.

"Your protection begins immediately and odor removal is recognized in just minutes after application, eliminating not only new material odors, but lingering odors from aged construction materials."

"Superior Coatings. Superior Results"
