

Engineered Coating Systems for the Built Environment

Armorize with AbShield™

Breathable, Flame Barrier Coating for Building Materials

FL-808®

"Armorize with breathable flame protection"

AbShield™ FL-808 is designed to prime building materials and related surfaces where a fire resistant flame barrier coating is preferred.

FL-808 dries and forms a durable, breathable film to facilitate moisture-vapor transfer while providing superior flame protection.

The coating can be applied to the surface of drywall, wood frames, cement siding, metal or steel, masonry and much more.

Our coatings are user friendly for spray and back-roll as well as brush and roller applications.

Stains are completely covered providing an excellent primed surface for final coats of desired interior paints

All of our coatings include an anti-microbial / anti-fungal formula to protect the dried film layer from promoting fungal growth.

"Eco-friendly coatings that improve fire resistivity while providing breathability, from the thought leaders at AbShield™"

"Superior Coatings. Superior Results."
